

User Guide for ADP322/ADP323 Evaluation Board

FEATURES

- Bias voltage range (V_{BIAS}): 2.5 V to 5.5 V**
- LDO input voltage range ($V_{IN1}/V_{IN2}, V_{IN3}$): 1.8 V to 5.5 V**
- Output current range: 0 mA to 200 mA per output**
- Output voltage accuracy: $\pm 1\%$**
- Operating temperature range: -40°C to $+125^{\circ}\text{C}$**

GENERAL DESCRIPTION

The [ADP322/ADP323](#) evaluation board is used to demonstrate the functionality of the ADP322/ADP323 series of linear regulators.

Simple device measurements, such as line and load regulation, dropout voltage, and ground current, can be demonstrated with two voltage supplies, a few voltmeters, current meters, and load resistors.

For more details about the ADP322/ADP323 linear regulators, see the ADP322/ADP323 data sheet.

EVALUATION BOARD HARDWARE AND SCHEMATIC

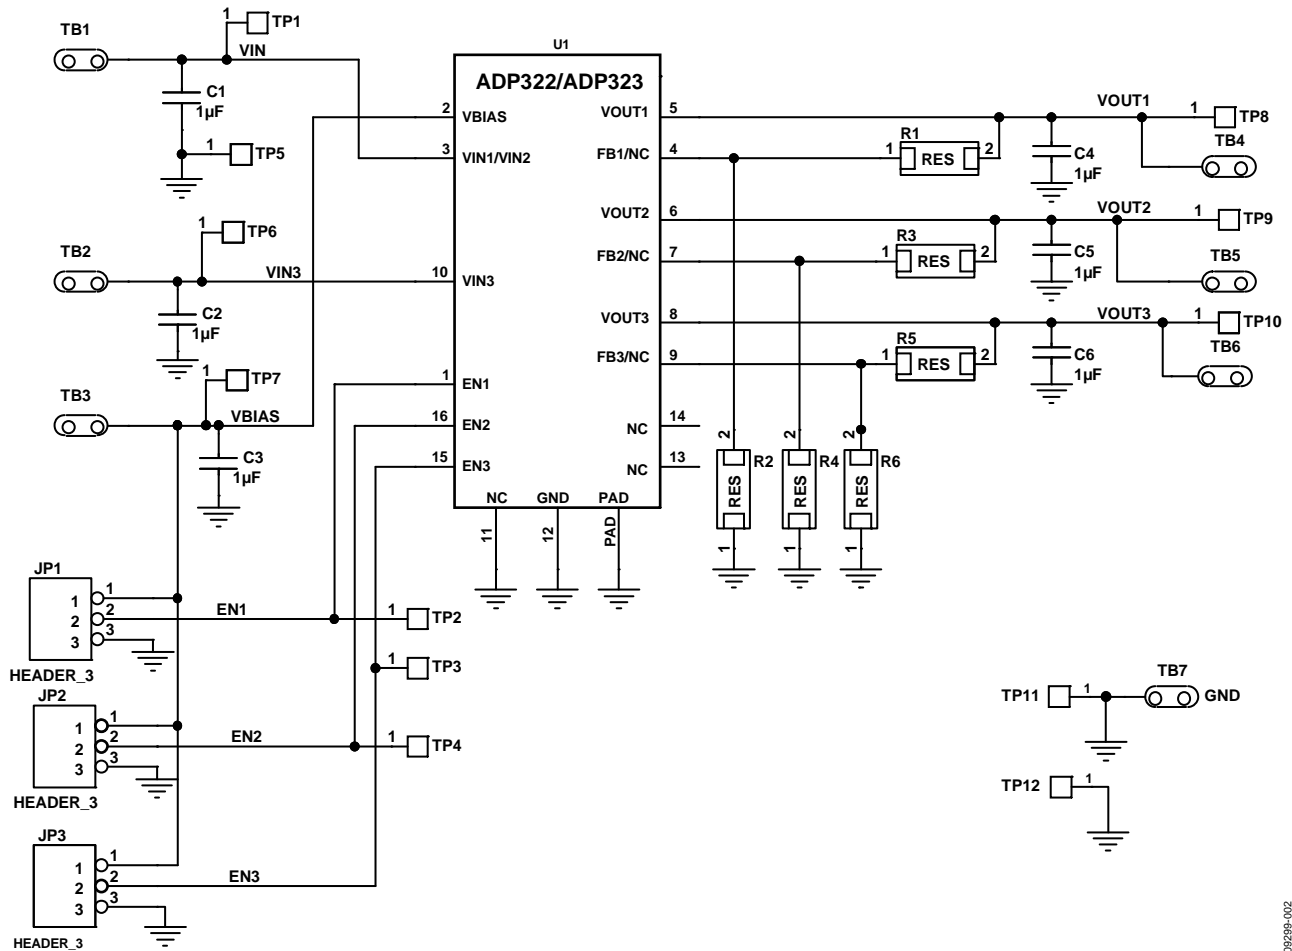

Figure 2. ADP322/ADP323 Evaluation Board Schematic

09299-002

Table 1. Evaluation Board Hardware Components

Component	Function	Description
U1 ¹	Linear regulator	ADP322/ADP323 low dropout linear regulator.
C1, C2, C3, C4, C5, C6	Input capacitor	1 µF input bypass capacitor, 0402 or 0603 case.
JP1, JP2, JP3	3-pin jumper	These jumpers connect EN1, EN2, and EN3 to VBIAS for automatic startup.
R1, R2, R3, R4, R5, R6	Resistor	Resistors for setting output voltage for the ADP323, 0603 size. Short R1, R3, and R5 to connect the output voltage to the feedback input for the ADP322.

¹ Component varies depending on the evaluation board type ordered.

OUTPUT VOLTAGE MEASUREMENTS

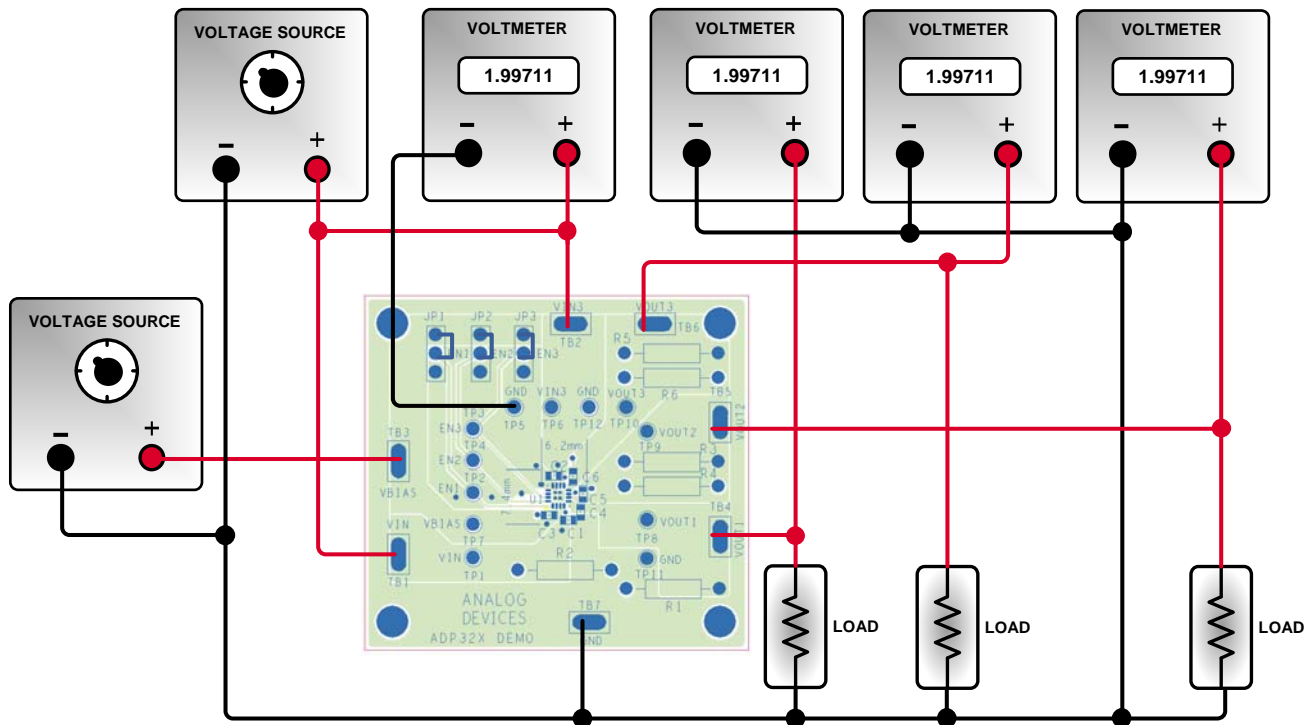

Figure 3. Output Voltage Measurement Setup

Figure 3 shows how the evaluation board can be connected to a voltage source and voltmeters for basic output voltage accuracy measurements. A resistor can be used as the load for the regulator. Ensure that the resistor has a power rating adequate to handle the power expected to be dissipated across it. An electronic load can be used as an alternative. In addition, ensure that the voltage source can supply enough current for the expected load levels.

Follow these steps to connect to a voltage source and voltmeters:

1. Insert R1, R2, R3, R4, R5, and R6 to set voltages for an [ADP323](#). If an [ADP322](#) is used, short R1, R3, and R5 to connect the output voltages to the feedback input for each LDO.
2. Insert Jumpers JP1, JP2, and JP3 for automatic startup.
3. Connect the negative terminal (–) of the voltage sources to one of the GND pads on the evaluation board.
4. Connect the positive terminal (+) of the main voltage source to the VIN and VIN3 pads of the evaluation board.
5. Connect the positive terminal (+) of the bias voltage source to the VBIAS pad of the evaluation board. Set the bias voltage supply to a voltage from 2.5 V to 5.5 V.
6. Connect a load between VOUT1, VOUT2, and/or VOUT3 and one of the GND pads.

7. Connect the negative terminal (–) of the voltmeters to one of the GND pads.
8. Connect the positive terminal (+) of the voltmeters to VOUT1, VOUT2, and/or VOUT3 and VIN/VIN3.

The voltage sources can now be turned on.

LINE REGULATION MEASUREMENTS

For line regulation measurements, the regulator's outputs are monitored while its input is varied. For good line regulation, the outputs must change as little as possible with varying input levels. To ensure that the device is not in dropout mode during this measurement, V_{IN} must be varied between $V_{OUTNOM} + 0.5\text{ V}$ (or 1.8 V, whichever is greater) and V_{INMAX} , where V_{OUTNOM} is the highest of the three output voltages. For example, for an ADP322/ADP323 with a fixed 1.8 V output, V_{IN} must be varied between 2.3 V and 5.5 V. This measurement can be repeated under different load conditions. Figure 4 shows the typical line regulation performance of the ADP322/ADP323 with a fixed 1.8 V output.

Figure 4. Output Voltage vs. Input Voltage

LOAD REGULATION MEASUREMENTS

For load regulation measurements, the regulator’s outputs are monitored while the loads are varied. For good load regulation, the outputs must change as little as possible with varying load. The input voltage must be held constant during this measurement. The load currents can be varied from 0 mA to 200 mA per output. Figure 5 shows the typical load regulation performance of a single 1.8 V output of the ADP322/ADP323 for an input voltage of 2.3 V to 5.5 V.

Figure 5. Output Voltage vs. Load Current

DROPOUT VOLTAGE MEASUREMENTS

Dropout voltage can be measured using the configuration shown in Figure 3. Dropout voltage is defined as the input-to-output voltage differential when the input voltage is set to the nominal output voltage. This applies only to output voltages above 1.8 V. Dropout voltage increases with larger loads.

For more accurate measurements, an additional voltmeter can be used to monitor the input voltage across the input capacitor. The input supply voltage may need to be adjusted to account for IR drops, especially if large load currents are used. Figure 6 shows the typical curve of the dropout voltage measurement with different load currents.

Figure 6. Dropout Voltage vs. Load Current, $V_{OUT} = 3.3\text{ V}$

GROUND AND BIAS CURRENT MEASUREMENTS

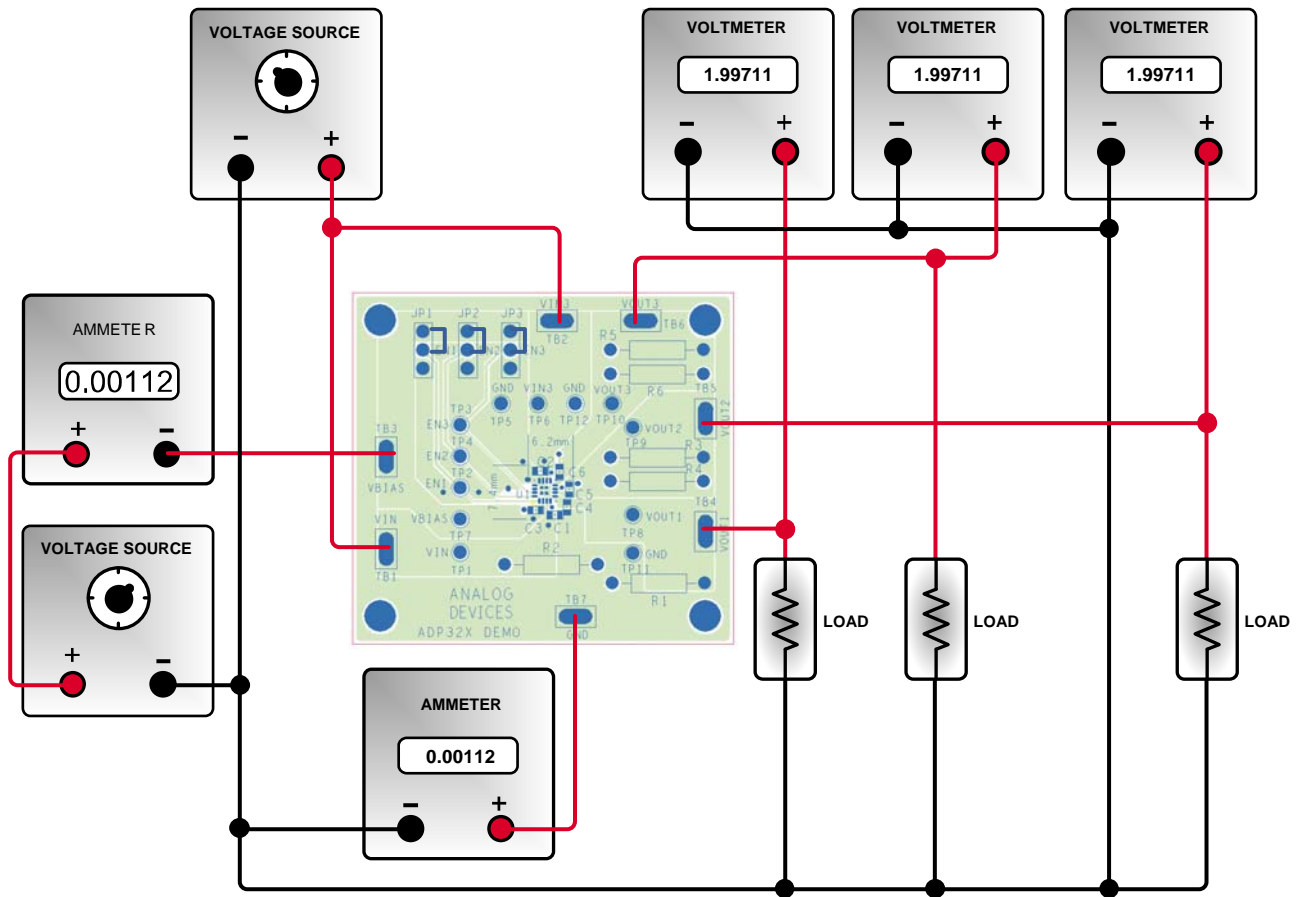

Figure 7. Ground and Bias Current Measurements Setup

Figure 7 shows how the evaluation board can be connected to a voltage source and ammeters for ground and bias current measurements. A resistor can be used as the load for the regulator. Ensure that the resistor has a power rating adequate to handle the power expected to be dissipated across it. An electronic load can be used as an alternative. Ensure that the voltage source can supply enough current for the expected load levels.

Use the following steps to connect to a voltage source and ammeters:

1. Insert R1, R2, R3, R4, R5, and R6 to set voltages for an [ADP323](#). If an [ADP322](#) is used, short R1, R3, and R5 to connect the output voltages to the feedback input for each LDO.
2. Insert Jumpers JP1, JP2, and JP3 for automatic startup.
3. Connect the positive terminal (+) of the main voltage source to the VIN and VIN3 pads of the evaluation board.
4. Connect the negative terminal (-) of an ammeter to the VBIAS pad of the evaluation board.
5. Connect the positive terminal (+) of the bias voltage source to the positive terminal (+) of the ammeter connected to the VBIAS pad. Set the bias voltage supply to a voltage between 2.5 V and 5.5 V.

6. Connect the positive terminal (+) of the other ammeter to one of the GND pads of the evaluation board.
7. Connect the negative terminal (-) of the ammeter connected to GND to the negative (-) terminal of the main voltage source.
8. Connect a load between VOUT1, VOUT2, and/or VOUT3 and the negative (-) terminal of the main voltage source.

The voltage sources can now be turned on.

GROUND CURRENT MEASUREMENT

Ground current measurements can determine how much current the internal circuits of the regulator consume while the circuits perform the regulation function. To be efficient, the regulator must consume as little current as possible. Typically, the regulator uses the maximum current when supplying its largest load level (200 mA per output). Figure 8 shows the typical ground current consumption for various load levels as a function of the input voltage for all three outputs set to 1.2 V and loaded equally.

The ground current for the ADP323 also includes the current through the output voltage setting dividers, R1 and R2, R3 and R4, and R5 and R6.

When the device is disabled (EN1, EN2, and EN3 = GND), ground current drops to less than 1 μA .

Figure 8. Ground Current vs. Input Voltage, All Outputs Loaded Equally, ADP322

BIAS CURRENT MEASUREMENT

Bias current measurements can determine how much current the regulator's internal bias circuits consume while the circuits

perform the regulation function. The bias current typically does not vary much with the load current or input voltage. Figure 8 shows the typical bias current consumption for various load levels at a bias voltage of 4 V for all three outputs loaded equally.

Figure 9. Bias Current vs. Load Current, All Outputs Loaded Equally, ADP322

PRINTED CIRCUIT BOARD LAYOUT CONSIDERATIONS

Heat dissipation from the package can be improved by increasing the amount of copper attached to the pins of the [ADP322/ADP323](#).

Place the input capacitor as close as possible to the VIN (VIN1/VIN2), VIN3, VBIAS, and GND pins. Place the output capacitors as close as possible to the VOUT1, VOUT2, VOUT3, and GND pins. Use 0402 or 0603 size capacitors and resistors to achieve the smallest possible footprint solution on boards where space is limited.

NOTES

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
