## MC100EL56

## 5 V ECL Dual Differential 2:1 Multiplexer

## Description

The MC100EL56 is a dual, fully differential 2:1 multiplexer. The differential data path makes the device ideal for multiplexing low skew clock or other skew sensitive signals. Multiple $\mathrm{V}_{\mathrm{BB}}$ pins are provided to ease AC coupling input signals.

The $\mathrm{V}_{\mathrm{BB}}$ pins, an internally generated voltage supply, are available to this device only. For single-ended input conditions, the unused differential input is connected to $\mathrm{V}_{\mathrm{BB}}$ as a switching reference voltage. $\mathrm{V}_{\mathrm{BB}}$ may also rebias AC coupled inputs. When used, decouple $\mathrm{V}_{\mathrm{BB}}$ and $\mathrm{V}_{\mathrm{CC}}$ via a $0.01 \mu \mathrm{~F}$ capacitor and limit current sourcing or sinking to 0.5 mA . When not used, $\mathrm{V}_{\mathrm{BB}}$ should be left open.

The device features both individual and common select inputs to address both data path and random logic applications.

The differential inputs have special circuitry which ensures device stability under open input conditions. When both differential inputs are left open, the D input will pull down to $\mathrm{V}_{\mathrm{EE}}$. The $\overline{\mathrm{D}}$ input will bias around $\mathrm{V}_{\mathrm{CC}} / 2$ forcing the Q output LOW.

## Features

- 580 ps Typical Propagation Delays
- Separate and Common Select
- The 100 Series Contains Temperature Compensation
- PECL Mode Operating Range:
- $\mathrm{V}_{\mathrm{CC}}=4.2 \mathrm{~V}$ to 5.7 V with $\mathrm{V}_{\mathrm{EE}}=0 \mathrm{~V}$
- NECL Mode Operating Range:
- $\mathrm{V}_{\mathrm{CC}}=0 \mathrm{~V}$ with $\mathrm{V}_{\mathrm{EE}}=-4.2 \mathrm{~V}$ to -5.7 V
- Internal Input Pulldown Resistors on D(s), SEL(s), and COM_SEL
- Q Output will Default LOW with Inputs Open or at $\mathrm{V}_{\mathrm{EE}}$
- These Devices are Pb-Free, Halogen Free and are RoHS Compliant

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

1. Input and output parameters vary $1: 1$ with $\mathrm{V}_{\mathrm{CC}}$. $\mathrm{V}_{\mathrm{EE}}$ can vary $+0.8 \mathrm{~V} /-0.5 \mathrm{~V}$.
2. Outputs are terminated through a $50 \Omega$ resistor to $\mathrm{V}_{C C}-2.0 \mathrm{~V}$.
3. $\mathrm{V}_{\text {IHCMR }}$ min varies $1: 1$ with $\mathrm{V}_{\mathrm{EE}}, \mathrm{V}_{\mathrm{IHCMR}}$ max varies $1: 1$ with $\mathrm{V}_{\mathrm{CC}}$. The $\mathrm{V}_{\mathrm{IHCMR}}$ range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between $\mathrm{V}_{\mathrm{PP}}$ min and 1 V .

| $\mathrm{t}_{\mathrm{r}}$ $\mathrm{t}_{\mathrm{f}}$ | Output Rise/Fall Times Q (20\%-80\%) | 200 |  | 540 | 200 |  | 540 | 200 |  | 540 | ps |

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm . Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

1. $\mathrm{V}_{\mathrm{EE}}$ can vary $+0.8 \mathrm{~V} /-0.5 \mathrm{~V}$.
2. Within-device skew is defined as identical transitions on similar paths through a device.
3. Duty cycle skew is defined only for differential operation when the delays are measured from the cross point of the inputs to the cross point of the outputs.
4. $\mathrm{V}_{\mathrm{PP}(\mathrm{min})}$ is minimum input swing for which AC parameters guaranteed. The device has a DC gain of $\approx 40$.
