● Introduction

The functionality of the PETL-7000/t(P)ET series modules is almost the same as the PET-7000. The major difference is that the PET-7000 module supports user-defined web HMI interface and more connections, while the PETL-7000/t(P)ET supports higher speed of DI counter, frequency measurement, DO as PWM and ultra low power consumption. Especially the t(P)ET modules are designed with tiny form factor and small channel count that are suitable in room control and monitor applications.

DIO Pair-Connection (Mirror)

The PETL-7000/t(P)ET series Ethernet I/O modules support various I/O types, like photo-isolated digital input, relay contact, PhotoMOS relay, and open-collector output. The module can be used to create DI to DO pair-connection (mirror) through the Ethernet. Once the configuration is completed, the modules can automatically read the local DI status and write to remote DO channels via the Modbus TCP protocol in the background. It's useful when connecting digital I/O devices that do not themselves have Ethernet capability.

DO as PWM (Pulse Width Modulation)

The DOs on the PETL-7000/t(P)ET series provide PWM (pulse width modulation, pulse generator) function that can be used in applications such as alarm light, flash light controls... etc. Once the configuration is finished, the module will automatically and continuously switch the DO output ON and OFF. This removes the busy control by remote host and also reduces the network loadings. Users can set different frequency (50 or 100 Hz Max.) and duty cycle

for the PWM function in each digital output channel. In addition, the two DO channels can work independently or simultaneously. This function reduces the complexity of the control system and enhances the timing accuracy of pulse output.

32-bit High Speed Digital Counter

Polling the remote DI status back and then counting the ON/OFF changes in host computer may get quantity errors caused by communication delay. The PETL-7000/t(P)ET series module has built-in 32-bit counter function; it counts the DI ON/OFF changes in site to prevent counting errors caused by the communication latency. The 32-bit counter of the PETL-7000/t(P)ET modules can count up to 4,294,967,296 and accept a frequency up to 3,500 Hz (without filter), so it can suitable for more applications such as production counting, button or switch ON/OFF counting, event counting... etc..

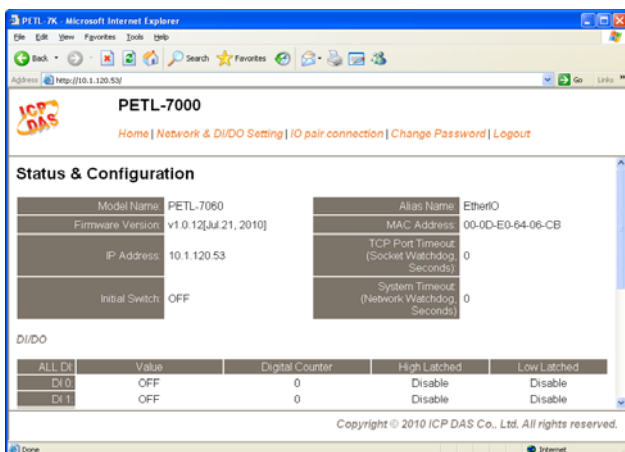

Frequency Measurement

The PETL-7000/t(P)ET module also supports frequency measurement function; it counts the DI ON/OFF changes in a certain time and then calculate the frequency automatically. Rather than polling remote DI status back and then compute the frequency in the host PC, our module can directly count out the frequency (3.5 kHz Max.) in site. This reduces the frequency errors caused by communication latency between two ends, and also reduces the network loadings. In order to applying for more applications, this module provides 3 scan modes (0.1s, 1s and single-pulse) and 4 moving average levels for user to select the best way in their applications. This feature can be used for rotation and speed measurements... etc.

Easy Network Configuration

DHCP minimizes configuration errors caused by manual IP address configuration, such as address conflicts caused by the assignment of an IP address to more than one computer or device at the same time. The PETL-7000/tET/tPET

series module supports the DHCP client function, which allows the PETL-7000/tET/tPET to easily obtain the necessary TCP/IP configuration information from a DHCP server. The module also contains a UDP responder that transmits its IP address information to a UDP search from the eSearch utility program, making local management more efficient.

The series of Ethernet I/O modules features a powerful 32-bit MCU to enable efficient handling of network traffic. It also has a built-in web server that provides an intuitive web management interface to allow users to modify the settings of the module including DHCP/Static IP and gateway/mask.

Dual Watchdog with Power-on and Safe Value

The module provides dual watchdog: CPU watchdog (hardware function) and host watchdog (software function). The CPU watchdog automatically resets the CPU if the built-in firmware is operating abnormally, while the host watchdog sets the digital output with predefined safe-value when there is no communication between the module and the host (PC or PLC) for a period of time (watchdog timeout). The dual watchdog is an important feature that ensures the module operates continuously, even in harsh environments.

PoE (Power over Ethernet)

The PETL-7000/tPET series module offers true IEEE 802.3af-compliant (classification, Class 1) Power over Ethernet (PoE) using a standard category 5 Ethernet cable to receive power from a PoE switch such as the NS-205PSE. If there is no PoE switch on site, the module will also accept power input from a DC adapter. The PETL-7000/tET/tPET series is designed for ultra-low power consumption, reducing hidden costs from increasing fuel and electricity prices, especially when you have a huge amount of device servers installed. Reducing the amount of electricity consumed by choosing energy-efficient equipment can have a positive impact on maintaining a green environment.

The module is equipped with removable terminal block connectors to allow easy wiring. For maximum space savings, the tET/tPET series is offered in an amazing tiny form-factor while the PETL-7000 series is palm-size form-factor; this makes them can be easily installed in anywhere, even directly embedded into a machine.

Features

- Cost-effective Ethernet I/O modules (Modbus TCP/UDP)
- Contains a 32-bit MCU that efficiently handles network traffic
- 10/100 Base-TX Ethernet, RJ-45 x1 (Auto-negotiating, Auto MDI/MDIX, LED Indicator)
- Includes redundant power inputs: PoE and DC input
- Supports TCP, UDP, HTTP, DHCP, BOOTP and TFTP protocols
- Supports UDP responder for device discovery
- Supports web configuration and firmware update via Ethernet
- Supports PWM (Pulse Width Modulation) in DO channels
- Supports latched DI and 32-bit high-speed counter functions
- Supports I/O pair-connection through the Ethernet
- Dual-watchdog with power-on and safe value
- Easy DIN-Rail mounting
- RoHS compliant & no Halogen
- Made from fire retardant materials (UL94-V0 Level)
- Low power consumption (about 1.7 W only)

 Tiny Ethernet I/O modules

Features

- Cost-effective tiny Ethernet I/O modules (Modbus TCP/UDP)
- Contains a 32-bit MCU that efficiently handles network traffic
- 10/100 Base-TX Ethernet, RJ-45 x1 (Auto-negotiating, auto MDI/MDIX, LED Indicators)
- Includes redundant power inputs: PoE and DC input
- Supports TCP, UDP, HTTP, DHCP, BOOTP and TFTP protocols
- Supports UDP responder for device discovery
- Supports web configuration and firmware update via Ethernet
- Supports PWM (Pulse Width Modulation) in DO channels
- Supports latched D/I and 32-bit low-speed counter functions
- Supports I/O pair-connection through the Ethernet
- Dual-watchdog with power-on and safe value
- Tiny form-factor with easy DIN-Rail mounting
- RoHS compliant & no Halogen
- Made from fire retardant materials (UL94-V0 Level)
- Low power consumption (about 1.7 W only)

Digital Input						
Input Channels	6		2			
Input Type (Device)	Wet Contact (Sink, Source)					
On Voltage Level	+10 V _{DC} ~ +50 V _{DC}					
Off Voltage Level	+4 V _{DC} max.					
Input Impedance	10 k Ohm					
Counters	Max. Count: 4,294,967,285 (32 bits)					
	Max. Input Frequency: 3.5 kHz (without filter)					
	Min. Pulse Width: 0.15 ms					
Frequency Measurement	3.5 kHz in Mode "1000 ms" (+/-1 Hz error)					
Overvoltage Protection	+70 V _{DC}					
Isolation	3750 Vrms					
Digital Output						
Output Channels	-		2			
Output Type (Module)	-		Sink, Open Collector (NPN)		Source, Open Collector (PNP)	
Output Voltage	-		+5 V _{DC} ~ +30 V _{DC}		+10 V _{DC} ~ +40 V _{DC}	
Max. Load Current	-		100 mA/channel at 25 °C Direct drive power relay module		650 mA/channel at 25 °C	
PWM	100 Hz Max. (High/Low duty cycle range = 5 ~ 65,535 ms)					
Over-Voltage	-		+60 V _{DC}		+48 V _{DC}	
Short Circuit Protection	-		-		Yes	
Output Isolation	-		3750 Vrms
