ASNT6193-KHC DC-32*GHz* 1-to-3 Analog Signal Splitter

- DC to 32*GHz* broadband linear signal splitter
- One differential CML-type input port and three phase-matched differential CML-type output ports
- Differential input linearity range up to 1200mV p-p
- Differential gain of approximately 0dB
- Adjustable currents for bandwidth and peaking control
- Low jitter and limited temperature variation over industrial temperature range
- Single +3.4V or -3.4V power supply
- Power consumption: 1050mW typical
- Fabricated in SiGe for high performance, yield, and reliability
- Custom CQFN 24-pin package

DESCRIPTION

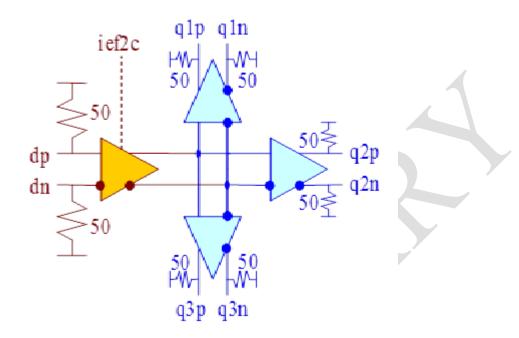

Fig. 1. Functional Block Diagram

The temperature stable ASNT6193-KHC 1-to-3 analog signal splitter is intended for use in high-speed interleaved ADCs or similar systems. The IC shown in Fig. 1 can receive a broad-band analog signal at its differential input dp/dn and effectively distribute it to three separate phase matched differential outputs q1p/q1n, q2p/q2n, and q3p/q3n with a nominal gain of 0dB. A low-speed analog current control ief2c is available for bandwidth and peaking adjustment. A flat frequency response can be achieved at lower control voltages.

The part's I/O's support the CML logic interface with on chip 500hm termination to vcc and may be used differentially, AC/DC coupled, single-ended, or in any combination (also see POWER SUPPLY CONFIGURATION). In the DC-coupling mode, the input signal's common mode voltage should comply with the specifications shown in ELECTRICAL CHARACTERISTICS. In the AC-coupling mode, the input termination provides the required common mode voltage automatically.

POWER SUPPLY CONFIGURATION

The part can operate with either negative supply (vcc = 0.0V = ground and vee = -3.4V), or positive supply (vcc = +3.4V and vee = 0.0V = ground). In case of the positive supply, all I/Os need AC termination when connected to any devices with 50Ohm termination to ground. Different PCB layouts will be needed for each different power supply combination.

All the characteristics detailed below assume VCC = 0.0V and VCC = -3.4V.

ABSOLUTE MAXIMUM RATINGS

Caution: Exceeding the absolute maximum ratings shown in Table 1 may cause damage to this product and/or lead to reduced reliability. Functional performance is specified over the recommended operating conditions for power supply and temperature only. AC and DC device characteristics at or beyond the absolute maximum ratings are not assumed or implied. All min and max voltage limits are referenced to ground.

Table 1. Absolute Maximum Ratings

Parameter	Min Max		Units	
Supply Voltage (vee)		-3.8	V	
Power supply current		400	mA	
Input Voltage	vcc-1.0	vcc+0.4	V	
RF Input Voltage Swing (SE)		0.8	V	
Analog control voltages	vee	VCC	V	
Case Temperature		+90	°C	
Storage Temperature	-40	+100	°C	
Operational Humidity	10	98	%	
Storage Humidity	10	98	%	

TERMINAL FUNCTION

TERMINAL		AL	DESCRIPTION				
Name	No.	Type

PACKAGE INFORMATION

The chip die is housed in a custom 24-pin CQFN package shown in Fig. 2. The package provides a center heat slug located on its back side to be used for heat dissipation. ADSANTEC recommends for this section to be soldered to the vcc plain, which is ground for a negative supply, or power for a positive supply.

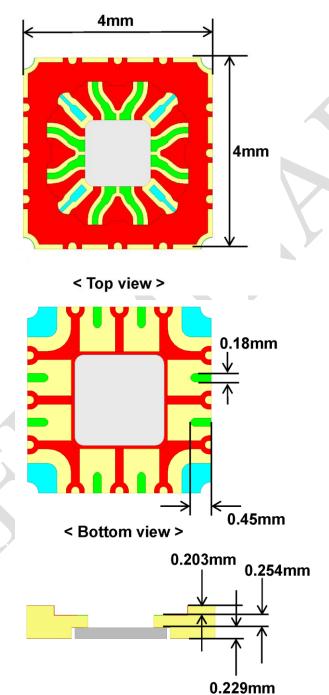

Fig. 2. CQFN 24-Pin Package Drawing (All Dimensions in mm)

The part's identification label is ASNT6193-KHC. The first 8 characters of the name before the dash identify the bare die including general circuit family, fabrication technology, specific circuit type, and part version while the 3 digits after the underscore represent the package's manufacturer, type, and pin out count.

This device complies with the Restriction of Hazardous Substances (RoHS) per EU 2011/65/EU for all ten substances.
