

**MATERIAL**

Polyamide based (PA) technopolymer, black colour, matte finish.

**STANDARD EXECUTION**

DIN 934 zinc-plated steel nut (included in the supply).

**FEATURES AND APPLICATIONS**

The two end-cap parts are connected together by means of two pins which are housed in special counter-seats. A cavity inside the end-cap is provided for housing an hexagonal nut DIN 934. The assembly can be performed simply by positioning the end-cap inside the tube, with no need of screws or other fasteners.

**SPECIAL EXECUTIONS ON REQUEST**

End-cap without nut.

\* The max limit static load is the value above which the load applied to the element may cause some plastic material breakage, under particular conditions of use. Obviously, a factor that takes into consideration the importance and the safety level of the specific application must be applied to this value. The values shown in the table refer to the use of the end-cap in combination with a steel tube. The use of an aluminum tube may cause a decrease in the max limit static load equal to 25% due to possible deformations of the tube section under load.
